

# Connected Fleet Visibility at Scale

Read the Case Study

Fleet operations increasingly depend on real-time location data and uninterrupted connectivity, with nearly 297 million connected fleet devices expected to be in operation by 2033. As fleets expand across regions, carriers, and network environments, maintaining consistent connectivity becomes critical to supporting efficient day-to-day operations.

Reliable connectivity enables fleet managers to access real-time telematics - helping reduce downtime, improve response times, and make faster, data-driven decisions. With scalable connectivity, fleets can better manage growing device volumes while delivering the reliability and performance modern transportation operations demand.

## Challenges KORE Helps You Overcome

Unreliable  
Connectivity

Complex Carrier  
Management

Scaling  
Complexity

Rising Costs

Downtime &  
Service  
Interruptions

## What Sets us Apart

- **Platform & Analytics** – Get a single-pane view of all your connected devices throughout their lifecycle from provisioning, activation, suspension, monitoring, billing, and more.
- **Operations Management** – Manage and monitor the entire operation of provided services 24 x 7.
- **Connectivity** – Multi-network connectivity designed for fleets in motion across regions

## KORE Powered Fleet Benefits

1. Real-time location visibility
2. Optimized routing and dispatch
3. Improved fleet utilization
4. Driver safety insights
5. Scalable fleet operations

## Why KORE?

KORE connectivity solutions help location tracking device providers deliver reliable, real-time visibility for vehicles operating across diverse and constantly changing environments. From fleet vehicles and trailers to high-value mobile assets, KORE enables continuous connectivity that supports accurate GPS tracking, telematics, route optimization, theft recovery, and operational monitoring. With global coverage, KORE helps ensure tracking devices stay connected as vehicles move across regions - enabling providers to improve asset visibility, reduce operational complexity, and support smarter, more efficient fleet operations.
